ITEC 204 – Data Structures and Algorithms

Name: Lhie Jay L. Canlas	Date: Sep 25, 2026
Section: BSIT- 2B	Instructor: Maxyne Nuela Ignacio

- I. **Objective:** Write a short explanation of what your program is designed to do. (Minimum of 3 sentences)

Answer:

The program helps handle IT automation incident tickets with a simple list. You can add new tickets, show what is in the list, and look up tickets by keyword. You can also take tickets out when needed and check how many are stored. This setup keeps active incidents in order and makes it easier to work with tickets even after they are marked done.

- II. **Program Operations:** Briefly explain how your program performs each operation. (Insert Specific Code Line and Your Explanation)

Add Incident:

Specific Code Line:

```
incidents.append({"id": incident_id, "bot": bot, "description": description})
```

Explanation:

This code adds a new incident ticket to the list. It stores the Incident ID, Bot, and Short Description of the incident.

Display Incidents:

Specific Code Line:

```
for incident in incidents:  
    print(incident)
```

Explanation:

This code goes through the list and displays all the active incident tickets.

Search Incident:

Specific Code Line:

```
for incident in incidents:  
    if incident["id"] == search_id:
```

College of Computer Studies

Explanation:

This code checks each incident in the list and finds the ticket that matches the Incident ID entered by the user.

Remove Resolved Incident:

Specific Code Line:

```
incidents.remove(incident)
```

Explanation:

This code removes an incident ticket from the list after it has been resolved.

Count Active Incident:

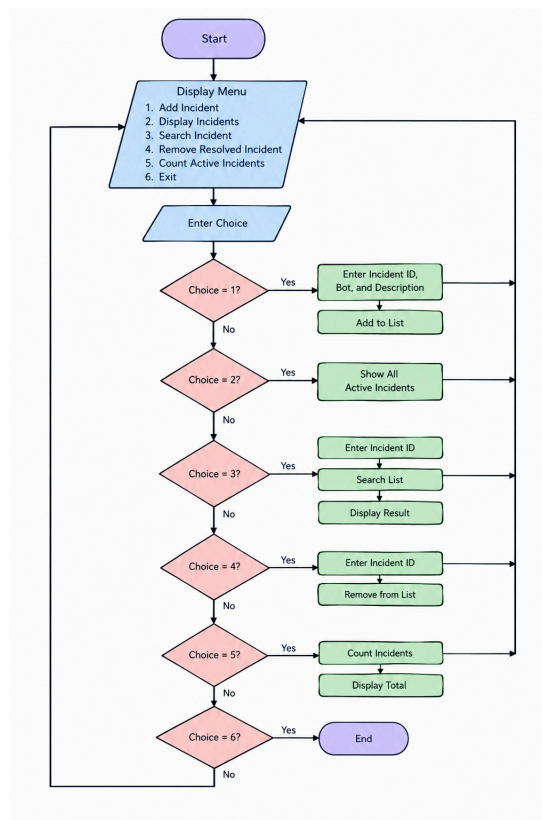

Specific Code Line:

```
print("Active Incidents:", len(incidents))
```

Explanation:

This code removes an incident ticket from the list after it has been resolved.

III. **Flowchart:** Create a flowchart showing the overall process and logic of your program.

- IV. **Conclusion:** Briefly explain what you learned from the activity and how the linear data structure was applied.

Answer:

In this activity, I learned how to use a linear data structure to manage incident tickets. I learned how to add, display, search, remove, and count data using a list. I also learned how a linear data structure can help organize and manage incident records in a simple way.
